This plan has 2 BIG unacceptable issues -

1) The storage of contaminated materials by placing the materials in an area next to the river which can be rereleased if flooded and/or if there occurs the significant earthquake here in our timebomb subduction zone.

If millions are being spent to protect against tsunami damage at the coast, why would the cause events for tsunamis be not planned for in toxic containment from Portland Harbor clean up?

2) After the millions are spent on the current proposed cleanup, will your children or grandchildren be able to safely eat the fish in the Willamette from the site or even up or down river after the token clean up?

Why spend millions to only have it all be for nothing in terms of river toxicity elimination. The toxicity was put there by industry and overseen by federal/state/municipal oversight - don't do a half hearted token 'white-wash' - Do the honorable, responsible right thing. Do what you and other informed intelligent responsible environmental decision makers know is the right thing.
